Word Bank

Feeding and Eating Disorders	*Bulimia Nervosa*	*Dependent Personality Disorder*
Personality Disorders	*Schizoid Personality Disorder*	*Narcissistic Personality Disorder*
Obsessive-Compulsive Personality Disorder (OCPD)	*Paranoid Personality Disorder*	*Avoidant Personality Disorder*
Cluster C	*Cluster B*	*Cluster A*
Histrionic Personality Disorder	*Schizotypal Personality Disorder*	*Anorexia Nervosa*
Antisocial Personality Disorder	*Borderline Personality Disorder*	

This is guide 3 of 3 for Topic 5.4 (Sections 9–10). Section numbers match the study guide page.

9. Feeding and Eating Disorders

Content note: This section covers eating disorders at the level of definitions only. If anything here feels hard to read, it's okay to take a break and talk with your teacher, a school counselor, or another trusted adult.

_____ are characterized by a persistent, severely altered consumption or absorption of food that significantly impairs physical health or psychological functioning. Their development is multi-causal, heavily driven by cultural ideals of body shape, social pressures, genetic markers, and cognitive distortions regarding self-worth.

- _____: An eating disorder characterized by a severe restriction of food intake relative to requirements, an intense, irrational fear of gaining weight or becoming fat, and a deeply distorted body image, culminating in a significantly low, dangerous body weight.
- _____: An eating disorder characterized by recurrent episodes of binge eating (consuming an objectively large amount of food while feeling a lack of control) followed immediately by inappropriate compensatory behaviors—such as self-induced vomiting, fasting, misuse of laxatives, or excessive exercise—to frantically prevent weight gain.

Apply It: Which Eating Disorder Concept?

Using the word bank above, identify which concept best matches each scenario.

#	Scenario	Concept
1	A clinician groups together conditions marked by a persistent, severely altered pattern of eating that harms a person's physical health or psychological functioning.	

#	Scenario	Concept
2	A teenager has sharply restricted how much she eats, is intensely afraid of gaining weight, and sees her body as larger than it is, even though her weight has become dangerously low.	
3	A college student repeatedly eats a very large amount of food while feeling unable to stop, then takes drastic steps to prevent weight gain, and keeps the cycle secret.	

10. Personality Disorders

_____ are a distinct group of psychological disorders characterized by long-term, inflexible, and deeply ingrained patterns of thinking, feeling, and behaving that deviate significantly from cultural expectations. These patterns are pervasive across situations, begin early in adolescence or early adulthood, remain stable over time, and lead directly to personal distress or severe impairment in social and occupational relationships. As with many of the disorders covered in this unit, the causes are multi-causal—research points to biological and genetic predispositions, alongside social, cultural, behavioral, and cognitive factors that shape how these enduring patterns take root. They are organized clinically into three distinct thematic clusters:

The Odd or Eccentric Cluster

_____ Personality Disorders share a common baseline of odd, detached, or eccentric thinking and behavior.

- _____: Characterized by a pervasive, unwarranted distrust and suspicion of others, such that their motives are constantly interpreted as malicious or deceptive without sufficient evidence.
- _____: Characterized by a persistent pattern of detachment from social relationships and a highly restricted range of emotional expression in interpersonal settings, with the individual genuinely preferring isolation.
- _____: Characterized by severe discomfort in close relationships, eccentric behaviors, odd speech patterns, and cognitive or unusual perceptual distortions, such as magical thinking.

The Dramatic, Emotional, or Erratic Cluster

_____ Personality Disorders are bound together by a dramatic, highly emotional, unpredictable, or erratic baseline of expression and interaction.

- _____: Characterized by a persistent pattern of total disregard for, and flagrant violation of, the rights of others. This involves deceitfulness, chronic impulsivity, aggressiveness, and a profound lack of remorse or empathy for those they harm.
- _____: Characterized by extreme instability in mood, self-image, and interpersonal relationships, alongside marked impulsivity and frantic efforts to avoid real or imagined abandonment.
- _____: Characterized by a pervasive pattern of excessive emotionality and constant attention-seeking behavior, leaving the individual deeply uncomfortable when they are not the center of attention.
- _____: Characterized by an inflated, grandiose sense of self-importance, a deep need for excessive admiration, a sense of entitlement, and a complete lack of empathy for others.

The Anxious or Fearful Cluster

_____ Personality Disorders exhibit a prominent, underlying baseline of anxious, nervous, or fearful thinking and behavior.

- _____: Characterized by extreme social inhibition, pervasive feelings of inadequacy, and intense hypersensitivity to negative evaluation or rejection, leading the individual to avoid social interactions despite a deep internal desire for human connection.
- _____: Characterized by a pervasive, excessive psychological need to be taken care of by others, leading directly to submissive, clinging behaviors, decision-making paralysis, and an intense fear of separation.
- _____: Characterized by a pervasive, rigid pattern of perfectionism, extreme orderliness, and total behavioral control at the expense of flexibility, openness, and efficiency.

Apply It: Which Personality Disorder?

Using the word bank above, identify which concept best matches each scenario.

#	Scenario	Concept
1	A man is convinced, with no real evidence, that his neighbors are secretly plotting against him, and he reads malicious intent into every friendly comment.	
2	A woman has no interest in friendships or family gatherings, genuinely prefers to be alone, and shows little emotion even when she is praised.	
3	A manager charms investors, lies about his company's finances without any guilt, and shrugs off the harm to families who lose their savings.	
4	A department head believes he is far more special than everyone else, demands constant praise, expects special treatment, and shows no concern for his team.	
5	A man badly wants close friends but turns down every invitation, convinced he is inadequate and terrified of being criticized or rejected.	
6	A woman cannot make even small decisions without her partner's approval, clings to him, and is terrified of being left alone.	

Apply It: Which Cluster?

Using the word bank above, identify which concept best matches each scenario.

#	Scenario	Concept
1	A clinician groups together the personality disorders that share odd, detached, or eccentric thinking and behavior.	
2	A clinician groups together the personality disorders marked by dramatic, highly emotional, unpredictable, or erratic behavior.	
3	A clinician groups together the personality disorders marked by anxious, nervous, or fearful thinking and behavior.	

📺 *Video Notes: "Personality Disorders" (Crash Course Psychology #34)*

Watch the video above, then answer each question below in your own words. The video focuses on borderline and antisocial personality disorders and adds ideas that aren't on the page (like ego-dystonic vs. ego-syntonic disorders, PDNOS, and the dimensional model), and it doesn't cover every disorder on your page.

1. What is the difference between ego-dystonic and ego-syntonic disorders, and why are personality disorders hard to assess by self-report?

2. How does the video describe the history and the three clusters of personality disorders?

3. What problems does the video describe with the categories, and what alternative has been proposed?

4. What does the video say about borderline personality disorder?

5. How does the video describe antisocial personality disorder?

6. According to the video, what causes antisocial personality disorder, and how can it be treated?

Don't Trip Up! (Common Misconceptions)

⚠️ OCD vs. OCPD: Watch the acronyms closely! OCD (covered in Guide 5.4B) is an obsessive-compulsive disorder driven by explicit, distressing obsessions (intrusive thoughts) and compulsions (anxiety-reducing rituals). _____ is a personality disorder characterized by a lifelong, rigid personality style centered on perfectionism, neatness, and total control, without the presence of specific, distinct obsessions or compulsions.

Quick Check: Review Questions

Circle the best answer for each question below.

1. A woman regularly consumes an objectively large amount of food in a short period while feeling a complete lack of control, and immediately afterward, she induces vomiting to prevent any weight gain from the episode. This eating disorder is called:

- **A.** Anorexia Nervosa
- **B.** Bulimia Nervosa
- **C.** Obsessive-Compulsive Disorder
- **D.** Persistent Depressive Disorder

2. A woman experiences severe discomfort in close relationships, speaks in an odd, tangential manner that others find hard to follow, and genuinely believes she has the magical ability to sense when bad things are about to happen to people around her. This Cluster A personality disorder is called:

- **A.** Schizotypal Personality Disorder
- **B.** Narcissistic Personality Disorder
- **C.** Schizoid Personality Disorder
- **D.** Paranoid Personality Disorder

3. A man has a long history of lying to and manipulating others for personal gain, has been arrested multiple times for aggressive behavior, and shows absolutely no remorse or guilt for the harm he has caused to the people around him. This Cluster B personality disorder is called:

- **A.** Borderline Personality Disorder
- **B.** Narcissistic Personality Disorder
- **C.** Histrionic Personality Disorder
- **D.** Antisocial Personality Disorder

4. A woman experiences extreme, rapid shifts in her mood and self-image, engages in impulsive spending and reckless driving, and frantically calls her partner dozens of times a day out of an intense fear that he might abandon her. This Cluster B personality disorder is called:

- **A.** Borderline Personality Disorder
- **B.** Avoidant Personality Disorder
- **C.** Histrionic Personality Disorder
- **D.** Antisocial Personality Disorder

5. A woman feels deeply uncomfortable and almost distressed whenever she is not the center of attention at a social gathering, frequently exaggerates her emotional reactions, and dresses provocatively specifically to draw everyone's focus toward her. This Cluster B personality disorder is called:

- **A.** Narcissistic Personality Disorder
- **B.** Dependent Personality Disorder
- **C.** Histrionic Personality Disorder
- **D.** Borderline Personality Disorder

6. A man insists on rigidly organizing every single item in his home in a specific, exacting order, refuses to delegate tasks at work because he doesn't trust others to do them perfectly, and prioritizes flawless orderliness over actually completing his projects on time. This Cluster C personality disorder is called:

- **A.** Avoidant Personality Disorder
- **B.** Paranoid Personality Disorder
- **C.** Obsessive-Compulsive Disorder (OCD)
- **D.** Obsessive-Compulsive Personality Disorder (OCPD)
